FEATURES

- **EMI input filter, up to 50 dB attenuation**
- **–55° to +125°C operation**
- High frequency output filter
- 17 to 40 VDC input
- Fully isolated, magnetic feedback
- 600 kHz typical–Single Ended Forward
- Inhibit and synchronization functions
- Indefinite short circuit protection
- Trim and remote sense on singles
- Up to 83% efficiency
- Up to 50V for 50 ms transient protection

EMI FILTERED DC/DC CONVERTERS 28 VOLT INPUT

Size (max): 3.005 x 1.505 x 0.400 inches (76.33 x 38.23 x 10.16 mm)
Weight: 100 grams maximum
Screening: Standard or ES, see the Environmental Screening table

DESCRIPTION

The FMTR Series™ of DC/DC converters offers up to 30 watts of output power from single or dual output configurations. They operate over the full military temperature range with up to 83% efficiency. FMTR converters are packaged in hermetically sealed metal cases, making them ideal for use in military, aerospace and other high reliability applications.

CONVERTER DESIGN

The FMTR converters are constant frequency, pulse-width modulated switching regulators which use a quasi-square wave, single ended, forward converter design. Tight load regulation is maintained via wide bandwidth magnetic feedback and, on single output models, through use of remote sense.

Indefinite short circuit protection and overload protection are provided by a constant current-limit feature. This protective system senses current in the converter's secondary stage and limits it to approximately 115% of the maximum rated output current.

BUILT-IN FILTERS

The built-in input and output filters reduce layout issues and conserve board space. The 2.7 amp EMI input filter meets MIL-STD-461C, CE03 and allows filtering of additional converters through the filter output pins. The output filter reduces high frequency common and differential mode noise. It allows a higher bandwidth ripple voltage measurement and eliminates the need for external output decoupling capacitors. Both input and output filters reduce radiated emissions providing quieter operation than conventional DC/DC converters.

WARNING: REQUIRED DAMPING NETWORK

To prevent damage to the internal circuitry an external capacitor and resistor are required across the filter outputs (pins 3 and 4) as shown in Figure 1. This applies to both single and dual output models. The recommended capacitor type is wet tantalum, MIL-C-39006.

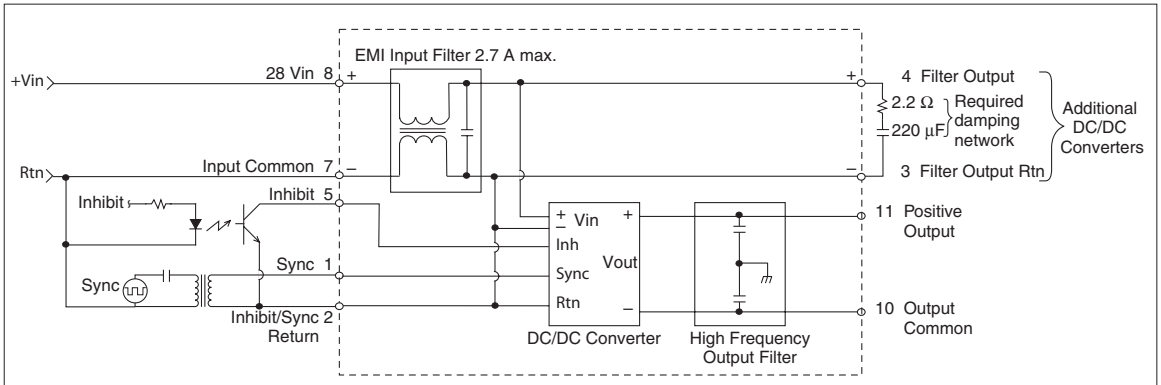

FIGURE 1: FMTR TYPICAL INPUT INTERFACE APPLIES TO SINGLES AND DUALS (SHOWN WITH SINGLE OUTPUT)

ABSOLUTE MAXIMUM RATINGS

Input Voltage
- 17 to 40 VDC

Output Power
- 25 to 30 watts depending on model
- Input filter current, 2.7 A max.

Lead Soldering Temperature (10 sec per pin)
- 300°C

Storage Temperature Range (Case)
- –65°C to +135°C

RECOMMENDED OPERATING CONDITIONS

Input Voltage Range
- 17 to 40 VDC continuous
- 50V for 50 ms transient protection

Case Operating Temperature (Tc)
- –55°C to +125°C full power
- –55°C to +135°C absolute

Derating Output Power/Current
- Linearly from 100% at 125°C to 0% at 135°C

SYNC AND INHIBIT

Sync (500 to 675 kHz)
- Duty cycle 40% min, 60% max
- Logic low 0.8 V max
- Logic high 4.5 V min, 5 V max
- Referenced to inh/sync return
- If not used, connect to inh/sync return

Inhibit TTL Open Collector
- Logic low (output disabled)
  Voltage ≤0.8 V
  Inhibit pin current 8.0 mA max
- Referenced to inh/sync return
- Logic high (output enabled)
  Open collector

EMI FILTER

Noise Rejection - Minimum

500 kHz	55 dB
1 MHz	60 dB
5 MHz	60 dB

TYPICAL CHARACTERISTICS

Output Voltage Temperature Coefficient
- 100 ppm/°C typical

Input to Output Capacitance
- 50 pF typ

Current Limit
- 115% of full load typical

Isolation
- 100 megohm minimum at 500 V

Audio Rejection
- 40 dB typical

Conversion Frequency
- Free run 550 min, 600 typ, 650 max kHz
- External sync 500 to 675 kHz

Inhibit Pin Voltage (unit enabled)
- 9 to 11 V

Input Filter DC Resistance
- 0.2 ohms max

Electrical Characteristics: -55°C to +125° Tc, 28 VDC Vin, 100% load, free run, unless otherwise specified.

Notes
1. Tc = –55°C to +125°C
2. Operation is limited below 17V (see Figure 19).
3. Indefinite short circuit protection not guaranteed above 125°C case.
4. Recovery time is measured from application of the transient to point at which Vout is within 1% of final value.
5. Transition time ≥10 µs.
6. Parameter shall be tested as part of device characterization and after design and process changes. Thereafter, parameters shall be guaranteed to the limits specified in the electrical Characteristics table.

Electrical Characteristics: -55°C to +125°C Tc, 28 VDC Vin, 100% load, free run, unless otherwise specified.

Notes

1. Tc = –55°C to +125°C.
2. Up to 90% of the total output current/power is available from either output providing the positive output is carrying at least 10% of the total output power.
3. Operation is limited below 17 V (see Figure 19).
4. Effect on the negative output under the following conditions: $+P_{out}$ 20% to 80%; $-P_{out}$ 80% to 20%
5. Effect on the negative output under the following conditions: $+P_{out}$ 50%; $-P_{out}$ 10% to 50%
6. Indefinite short circuit protection not guaranteed above 125°C case.
7. Recovery time is measured from application of the transient to point at which Vout is within 1% of final value.
8. Transition time ≥ 10 µs.
9. Parameter shall be tested as part of device characterization and after design and process changes. Thereafter, parameters shall be guaranteed to the limits specified in the electrical Characteristics table.

TRIM AND REMOTE SENSE (AVAILABLE ON SINGLE OUTPUT MODELS ONLY)

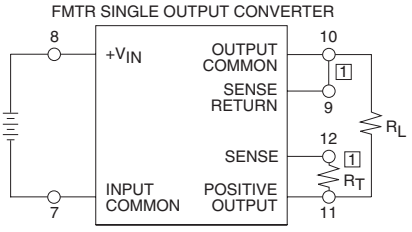

FIGURE 2: TRIM CONNECTION[1, 2, 3]

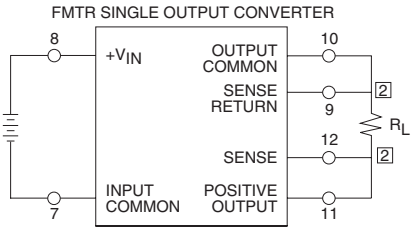

FIGURE 3: REMOTE SENSE[2, 3]

Trim Formulas

Vout = desired output voltage; Rt = trim resistor

3.3V: $Rt = \frac{1300 * Vout - 4304}{1.2475}$

5V: $Rt = \frac{1300 * Vout - 6512}{1.2475}$

12V: $Rt = \frac{1300 * Vout - 15631}{1.2475}$

15V: $Rt = \frac{1300 * Vout - 19498}{1.2475}$

Notes for Remote Sense and Trim

1. When trimming output voltage and/or remote sensing, the total output voltage increase must be less than 0.6 volts at the converters pins to maintain specified performance.
2. If neither voltage trim nor remote sense will be used, connect pin 9 to pin 10 and pin 11 to pin 12 or the output voltage will increase by 1.2 volts
3. CAUTION: The converter will be permanently damaged if the positive remote sense (pin 12) is shorted to ground. Damage may also result if the output common or positive output is disconnected from the load with the remote sense leads connected to the load.
