

SMRT Single, Dual and Triple Space DC-DC Converters

19-56 VOLT INPUT – 35 WATT – SPACE QUALIFIED

FEATURES

- Radiation tolerant space dc-dc converter
- Single event effects (SEE) LET performance to 86 MeV cm²/mg
- Total ionizing dose (TID) guaranteed to 100 krad(Si) RHA level R, per MIL-STD-883 method 1019
 - 50 - 300 rad(Si)/sec dose rate (Condition A)
 - 10 mrad(Si)/sec dose rate (Condition D)
- Built in MIL-STD-461 EMI filter
- Output trim from 51% to 124% of nominal
- Operating temperature -55° to +125°C
- Qualified to MIL-PRF-38534 Class H and K
- Input voltage range 19 to 56 V
- Transient protection 80 V for 120 ms
- Fully isolated, 5 port isolation
- Dual magnetic feedback
- Fixed high frequency switching
- Remote sense
- Inhibit function
- Synchronization input
- Indefinite short circuit protection
- Meets MIL-STD-704A transient standards

| MODELS | | |
|--------------------|--------------------------|------------|
| OUTPUT VOLTAGE (V) | | |
| SINGLE | DUAL | TRIPLE |
| 3.3 | Vout A 5 V, Vout B 5 V | +3.3 & ±12 |
| 5 | Vout A 12 V, Vout B 12 V | +3.3 & ±15 |
| 8.7 | Vout A 15 V, Vout B 15 V | +5 & ±7 |
| 12 | | +5 & ±12 |
| 15 | | +5 & ±15 |

DESCRIPTION

The Interpoint® SMRT Series™ of dc-dc converters offers up to 35 watts of power in a radiation tolerant design. The low profile SMRT converters are manufactured in our fully certified and qualified MIL-PRF-38534 production facility and packaged in hermetically sealed steel cases. They are ideal for use in programs requiring high reliability, small size, and high levels of radiation hardness assurance.

The SMRT converters are switching regulators which use a two-phase, phase shifted flyback design with a nominal switching frequency of 300 kHz. Close regulation is maintained with advanced constant frequency pulse width modulation design techniques. The SMRT's feed-forward compensation and discontinuous topologies provide high levels (60 dB peak) of input-to-output ripple rejection.

Two independent feedback loops are used to regulate the dual and triple outputs, one feedback loop regulates the two-phased single output. Each set of outputs is electrically isolated from the other and from the input. This product configuration eliminates cross regulation effects between output sets.

Configurations:

- Single Output: One dual-phase output
- Dual Output: Two isolated single-phase outputs
- Triple Output: One single-phased output (Main) isolated from one single-phase dual output (± Auxiliary)

SMRT Single, Dual and Triple Space DC-DC Converters

19-56 VOLT INPUT – 35 WATT – SPACE QUALIFIED

UNDERVOLTAGE LOCKOUT

The converters have an undervoltage lockout that will allow power conversion at approximately 17 volts on a rising input voltage and a conversion shut-down on a falling voltage at approximately 14.5 volts.

INHIBIT FUNCTION

The SMRT Series incorporates an inhibit terminal that can be used to disable internal switching. It is not recommended to tie the Inhibit pin of an SMRT directly to the Inhibit pin of another converter as the SMRT Inhibit pin can sink current. When pulling multiple inhibit signals low, a separate interface is recommended for each SMRT. The converter is inhibited when the Inhibit pin is pulled low (0.4 V). In the inhibit mode the inhibit pin current requirement is less than ~2 mA. The converter resumes normal operation when an open circuit is applied to the Inhibit pin or the Inhibit pin is open (unconnected). The open circuit voltage of the Inhibit pin is 5 to 6 volts. To enable the converter use an open collector on the Inhibit pin or leave it unconnected.

SYNCHRONIZATION

The Sync Input pin is isolated which allows Sync Return pin to be tied to the primary side, secondary side, or float with respect to all inputs and outputs. Input current into this pin is limited by a series 1 k ohm resistance.

RADIATION TOLERANCE

The SMRT dc-dc converters are designed to provide continuous normal operation through radiation levels associated with space missions and in tactical and strategic military environments. The converters will operate normally in radiation environments with up to 100 krad(Si) total dose. The converter will not exhibit low dose rate (LDR) effects at 10 mrad(Si)/sec dose rate up to a TID of 100 krad.

These levels of radiation tolerance make the SMRT converters suitable for electronics in programs where operation in high radiation environments is required.

SCREENING

SMRT converters offer the following screening options: Space Prototype (O), Class H, or Class K. Radiation tolerant to Radiation Hardness Assurance (RHA) levels of “-” (O), “P” or “R”, per MIL-PRF-38534. Interpoint model numbers use an “O” in the RHA designator position to indicate the “-” (dash) Radiation Hardness Assurance level of MIL-PRF-38534, which is defined as “no RHA”. See Table 27 and Table 28 for more information.

EMI

The SMRT has a built-in EMI input filter which brings the conducted emissions into compliance with both methods of MIL-STD-461, revisions C-CE03 and D-E-/F-CE102.

ELECTROSTATIC DISCHARGE (ESD) SENSITIVITY

Per MIL-PRF-38534, the SMRT Series converters are rated to ESD class 3B defined as sensitivity equal to, or greater than, 8000 volts.

SENSE

Tight load regulation is maintained via wide bandwidth magnetic feedback and through the use of remote sense on single output models and V_{OUT} A on dual output models. The sense pin function allows a remote connection for the voltage regulation circuit to compensate for voltage drops between the converter and the point of use.

Note that if the sense pins are connected but the output voltage pins are not, the converter may be damaged.

The maximum voltage drop from the output to the sense pin is shown in Table 1 below.

| NOMINAL OUTPUT VOLTAGE (V) ¹ | MAX VOLTAGE DROP (V) | MAX VOLTAGE AT CONVERTER (V_{MAX}) ¹ |
|---|----------------------|---|
| 3.3 ² | 0.58 | 3.88 |
| 5 | 1.0 | 6.0 |
| 8.7 ² | 1.9 | 10.58 |
| 12 | 2.68 | 14.68 |
| 15 | 3.36 | 18.36 |

TABLE 1: MAXIMUM VOLTAGE DROP USING REMOTE SENSE SINGLE AND DUAL MODELS ONLY

Notes for Table 1

1. Do not exceed maximum voltage.
2. The sense pin function for 3.3 and 8.7 is only available on single output models.

SMRT Single, Dual and Triple Space DC-DC Converters

19-56 VOLT INPUT – 35 WATT – SPACE QUALIFIED

OUTPUT VOLTAGE TRIM

There are two possible methods for output voltage trim. Trim can be achieved using the provided trim pin or in some cases the sense pin. The preferred method is the use of the trim pin. Every converter in the SMRT family provides a trim pin that allows at least one output to be adjusted. See Table 3 and Table 4 for maximum adjust range for each output voltage. The single output models provide a trim pin and remote sense. The dual output models allow remote sense on V_{OUT} A and have a trim pin on the V_{OUT} B. The triples have a trim pin on the V_{OUT} A (main) and a single trim pin for both V_{OUT} B auxiliaries.

For outputs without a trim pin, the output at the converter can be adjusted up by adding resistance in series with the sense pin.

See Table 2 for a summary of trim features and see below for details on the trim features. See Formula 1 for trimming down when using a trim pin, Formula 2 for trimming up when using a trim pin and Formula 3 when trimming up using Sense A pin on a dual output model.

NOTE: Do not exceed maximum current rating when trimming down.

NOTE: Do not exceed maximum power rating when trimming up.

| Voltage Adjust Feature | Singles | Duals | Triples |
|-----------------------------|--------------------|---------|----------------------|
| Trim Pin (Formulas 1 and 2) | Trim and Sense Pin | Trim B | Trim A, Trim B \pm |
| Sense Pin (Formula 3) | — | Sense A | — |

TABLE 2: TRIM AND SENSE VOLTAGE ADJUST

OUTPUT VOLTAGE TRIM DETAILS

The output voltage trim pin function is implemented with a resistor between the trim pin and either the output voltage pin or

the sense pin. Figure 1 and Figure 2 show the connections for the trim resistor (R_{TRIM}).

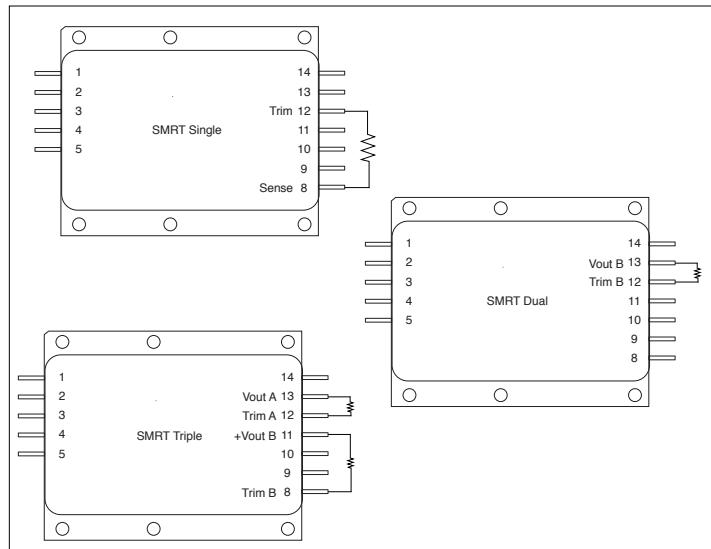

FIGURE 1: TRIM DOWN DIAGRAMS

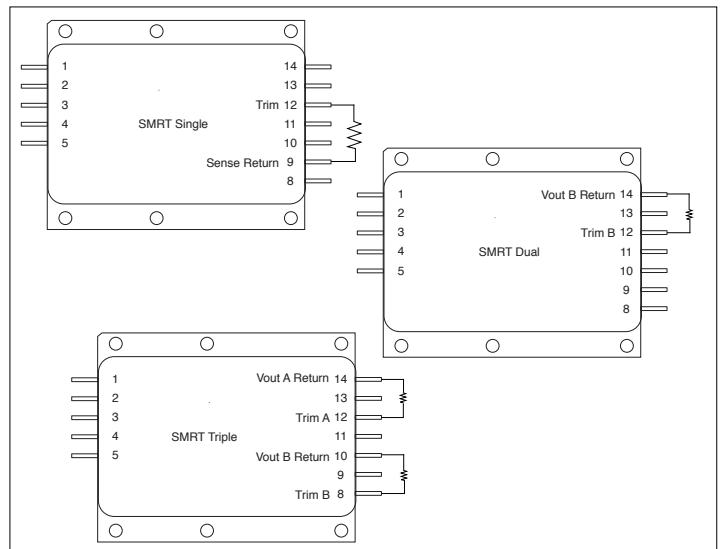

FIGURE 2: TRIM UP DIAGRAMS

SMRT Single, Dual and Triple Space DC-DC Converters

19-56 VOLT INPUT – 35 WATT – SPACE QUALIFIED

OUTPUT VOLTAGE TRIM DETAILS (CONTINUED)

TRIM DOWN USING TRIM PIN, ALL MODELS

To trim the output voltage lower than the nominal set point, connect R_{TRIM} as shown in Figure 1. The value of R_{TRIM} is calculated by the following equation:

| V_{NOM} | K | V_{MIN} | % OF V_{NOM} |
|---------------------|-------|-----------|----------------|
| 3.3 | 3500 | 3.18 | 96 |
| 5 single and triple | 4520 | 4.16 | 83 |
| 5 dual | 7040 | 4.38 | 88 |
| 7 | 8020 | 5.47 | 78 |
| 8.7 | 9040 | 6.13 | 70 |
| 12 | 11030 | 7.05 | 58 |
| 15 | 12900 | 7.65 | 51 |

TABLE 3: TRIM DOWN CONSTANTS WHEN USING TRIM PIN

TRIM UP USING TRIM PIN, ALL MODELS

To trim the output voltage higher than the nominal set point, connect R_{TRIM} as shown in Figure 2. The value of R_{TRIM} is calculated by the following equation:

| V_{NOM} | K | V_{MAX} | % of V_{NOM} |
|---------------------|------|-----------|----------------|
| 3.3 | 3000 | 3.70 | 112 |
| 5 single and triple | 3000 | 6.26 | 125 |
| 5 dual | 5280 | 5.82 | 116 |
| 7 | 5300 | 8.27 | 118 |
| 8.7 | 5300 | 10.46 | 120 |
| 12 | 5300 | 14.69 | 122 |
| 15 | 5300 | 18.54 | 124 |

TABLE 4: TRIM UP CONSTANTS WHEN USING TRIM PIN

TRIM UP USING SENSE A PIN ON DUAL MODELS ONLY

Trim Up $V_{OUT A}$

In addition to remote sensing, the Sense A pin may be used to increase the regulated output voltage at the $V_{OUT A}$ pin. This is accomplished by attaching a resistor (R_{ADJUST}) between the Sense A pin (pin 8) and the $V_{OUT A}$ pin (pin 11). The value of R_{ADJUST} is calculated by the following equation:

| V_{NOM} | K | V_{MAX} | % of V_{NOM} |
|-----------|-------|-----------|----------------|
| 5 | 1 | 6.00 | 120 |
| 12 | 0.98 | 12.98 | 108 |
| 15 | 1.134 | 16.13 | 107.5 |

TABLE 5: TRIM UP CONSTANTS WHEN USING SENSE PIN ON OUTPUT A OF DUAL OUTPUT MODELS

FORMULA 1: TRIM DOWN USING TRIM PIN

$$R_{TRIM} = K \left(V_{OUT} - V_{MIN} \right) / \left(V_{NOM} - V_{OUT} \right)$$

Where:

K = Multiplication constant from Table 3

V_{OUT} = Desired output voltage (must be greater than V_{MIN})

V_{MIN} = Minimum output voltage from Table 3

V_{NOM} = Nominal set point voltage of the converter

NOTE:

Do not exceed maximum current rating when trimming down.

FORMULA 2: TRIM UP USING TRIM PIN

$$R_{TRIM} = K \left(V_{MAX} - V_{OUT} \right) / \left(V_{OUT} - V_{NOM} \right)$$

Where:

K = Multiplication constant from Table 4

V_{OUT} = Desired output voltage (must be less than V_{MAX})

V_{MAX} = Maximum output voltage from Table 4

V_{NOM} = Nominal set point voltage of the converter

NOTE:

Do not exceed maximum power rating when trimming up.

FORMULA 3: TRIM UP USING SENSE A PIN

$$R_{ADJUST} = 240 \left(V_{OUT} - V_{NOM} \right) / \left(K + \left(V_{MAX} - V_{OUT} \right) \right)$$

Where:

V_{OUT} = Desired output voltage (must be less than V_{MAX})

V_{NOM} = Nominal set point voltage of the converter

V_{MAX} = Maximum achievable output voltage

NOTE:

Do not exceed maximum power rating when trimming up.

| | | 3R312, 3R315, 507, 512, 515 | T | K | R |
| FILL IN FOR MODEL # | <u>SMRT28</u> | _____ | _____ | / _____ | _____ |

Notes:

- Output Voltage: An R indicates a decimal point. 3R3 is 3.3 volts out. The 3R3 output voltage is only available in single and triple output models. The 3R312 and 3R315 triple output converters are +3.3 volt main and ± 12 or ± 15 volt auxiliaries. The 507 triple output converter is +5 main and ± 7 volt auxiliaries. The 512 and 515 triple output converters are +5 volt main and ± 12 or ± 15 volt auxiliaries.
- Number of Outputs: S is a single output, D is a dual output, and T is a triple output
- Screening: A screening level of O is a Space Prototype and is only used with RHA O. See Table 27 and Table 28 for more information.
- RHA: Interpoint model numbers use an "O" in the RHA designator position to indicate the "-" (dash) Radiation Hardness Assurance level of MIL-PRF-38534, which is defined as "no RHA." RHA O is only available with screening level O. See Table 28 for more information.

powerapps@crane-eg.com +1.425.882.3100 option 7***

Notes

1. Guaranteed by qualification test and/or analysis. Not an in-line test.
2. Triple outputs: The over-current limit will trigger when the sum of the auxiliary currents reaches 145% (typical value) of the maximum rated "total" current of the auxiliary outputs.
3. If sync is used at lower end of range, full load operation is not guaranteed.
4. Tested with Inhibit pin at 0 volts.

Notes

- Guaranteed by qualification test and/or analysis. Not an in-line test.
- To maintain regulation above 28 volts input, a minimum load is required of 0% at 28 volts input increasing linearly to 5% at 56 volts input.
- Converters meet MIL-STD-461 specification revisions for conducted emissions C-CE03 and D-E-/F-CE-102. The actual value of input ripple current is much less, the limit in the characteristic table is based on measurement resolution.
- Maximum power dissipation when output is shorted.

5. Recovery time is measured from application of the transient to point at which V_{OUT} is within 1% of V_{OUT} at final value.

6. Transition time $\geq 10 \mu\text{s}$.

7. Half load to/from full load.

8 Measured from release of inhibit or input voltage step.

Notes

- Guaranteed by qualification test and/or analysis. Not an in-line test.
- To maintain regulation above 28 volts input, a minimum load is required of 0% at 28 volts input increasing linearly to 5% at 56 volts input.
- Converters meet MIL-STD-461 specification revisions for conducted emissions C-CE03 and D-/E-/F-CE-102. The actual value of input ripple current is much less, the limit in the characteristic table is based on measurement resolution.
- Maximum power dissipation when output is shorted.
- Recovery time is measured from application of the transient to point at which V_{OUT} is within 1% of V_{OUT} at final value.
- Transition time $\geq 10 \mu\text{s}$.
- Half load to/from full load.
- Measured from release of inhibit or input voltage step.

Notes

- Guaranteed by qualification test and/or analysis. Not an in-line test.
- The specified maximum current/power is available from each output.
- To maintain regulation above 28 volts input, a minimum load is required of 0% at 28 volts input increasing linearly to 5% at 56 volts input. Applies to both outputs.
- Converters meet MIL-STD-461 specification revisions for conducted emissions C-CE03 and D-/E-/F-CE-102. The actual value of input ripple current is much less, the limit in the characteristic table is based on measurement resolution.
- Maximum power dissipation when output is shorted.
- Recovery time is measured from application of the transient to point at which V_{OUT} is within 1% of V_{OUT} at final value.
- Transition time $>10 \mu s$.
- Half load to/from full load.
- Measured from release of inhibit or input voltage step.
- Applies to each output.

SMRT Single, Dual and Triple Space DC-DC Converters

19-56 VOLT INPUT – 35 WATT – SPACE QUALIFIED

ELECTRICAL CHARACTERISTICS: -55°C TO +125°C CASE, 28 VIN, 100% LOAD, FREE RUN, UNLESS OTHERWISE SPECIFIED.

NOTES: For triple output models on Table 14 through Table 18.

1. Guaranteed by qualification test and/or analysis. Not an in-line test.
2. Up to the maximum specified auxiliary output current/power is available from either auxiliary output provided the total auxiliary output current/power does not exceed the total current/power specified.
3. To maintain regulation above 28 volts input, a minimum load is required of 0% at 28 volts input increasing linearly to 5% at 56 volts input. Applies to each output.
4. To maintain the cross regulation specification, one of the auxiliaries must always provide a minimum of 20% of the total auxiliary power used. Negative Vout cross regulation is referenced to 50%/50% balanced loads (at 100% of total rated output power - full load).
5. Cross regulation is measured under the following conditions:
Condition 1: $+P_{OUT} = 20 - 80\%$, $-P_{OUT} = 80 - 20\%$
Condition 2: $-P_{OUT} = 20 - 80\%$, $+P_{OUT} = 80 - 20\%$
6. Converters meet MIL-STD-461 specification revisions for conducted emissions C-CE03 and D-/E-/F-CE-102. The actual value of input ripple current is much less, the limit in the characteristic table is based on measurement resolution.
7. Efficiency measured with all outputs at full load.
8. Maximum power dissipation when all outputs are shorted simultaneously.
9. Recovery time is measured from application of the transient to point at which V_{OUT} is within 1% of V_{OUT} at final value.
10. Transition time $\geq 10 \mu s$.
11. Half load to/from full load.
12. The step load specification for the negative auxiliary output is guaranteed by qualification test. It is not an in-line test.
13. Measured from release of inhibit or input voltage step.
14. Applies to each auxiliary.

Notes

- Guaranteed by qualification test and/or analysis. Not an in-line test.
- The specified maximum current/power is available from each output.
- To maintain regulation above 28 volts input, a minimum load is required of 0% at 28 volts input increasing linearly to 5% at 56 volts input. Applies to both outputs.
- Converters meet MIL-STD-461 specification revisions for conducted emissions C-CE03 and D-/E-/F-CE-102. The actual value of input ripple current is much less, the limit in the characteristic table is based on measurement resolution.
- Maximum power dissipation when output is shorted.
- Recovery time is measured from application of the transient to point at which V_{OUT} is within 1% of V_{OUT} at final value.
- Transition time >10 μs.
- Half load to/from full load.
- Measured from release of inhibit or input voltage step.
- Applies to each output.

Notes: See page 28

SMRT Single, Dual and Triple Space DC-DC Converters

50 VOLT INPUT SPECIFICATIONS

Electrical Characteristics: -55°C to +125°C case, 50 Vin, 100% load, free run, unless otherwise specified.

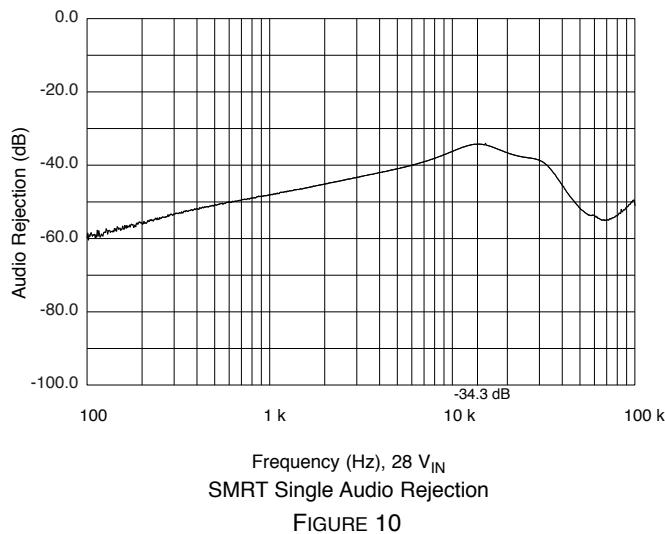

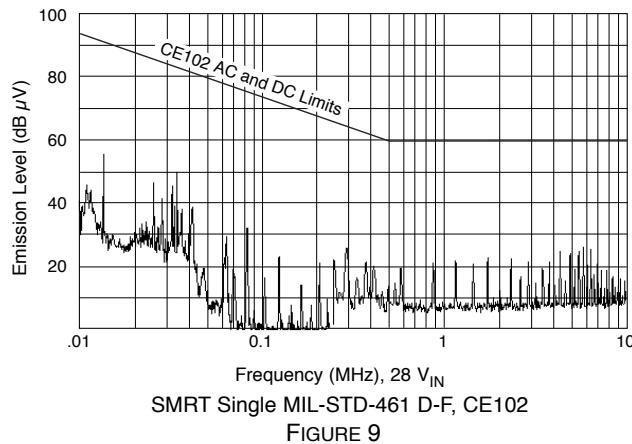

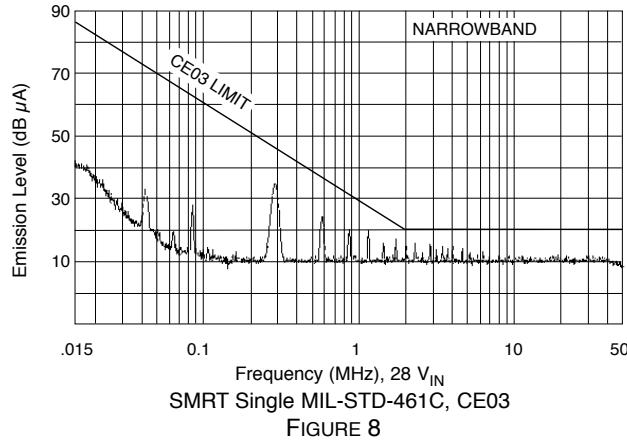

Notes: For triple output models on Table 22 through Table 26.

1. Guaranteed by qualification test and/or analysis. Not an in-line test.
2. Up to the maximum specified auxiliary output current/power is available from either auxiliary output provided the total auxiliary output current/power does not exceed the total current/power specified.
3. To maintain regulation above 28 volts input, a minimum load is required of 0% at 28 volts input increasing linearly to 5% at 56 volts in. Load percentage applies to the main output and also to the sum of the auxiliaries.
4. To maintain the cross regulation specification, one of the auxiliaries must always provide a minimum of 20% of the total auxiliary power used. Negative Vout cross regulation is referenced to 50%/50% balanced loads (at 100% of total rated output power - full load).
5. Cross regulation is measured under the following conditions:
Condition 1: $+P_{OUT} = 20\text{ - }80\%$, $-P_{OUT} = 80\text{ - }20\%$
Condition 2: $-P_{OUT} = 20\text{ - }80\%$, $+P_{OUT} = 80\text{ - }20\%$
6. Converters meet MIL-STD-461 specification revisions for conducted emissions C-CE03 and D-/E-/F-CE-102. The actual value of input ripple current is much less, the limit in the characteristic table is based on measurement resolution.
7. Efficiency measured with all outputs at full load.
8. Maximum power dissipation when all outputs are shorted simultaneously.
9. Recovery time is measured from application of the transient to point at which V_{OUT} is within 1% of V_{OUT} at final value
10. Transition time $>10\ \mu s$.
11. Half load to/from full load.
12. The Step Load specification for the negative auxiliary output is guaranteed by qualification test. It is not an in-line test.
13. Measured from release of inhibit or input voltage step.
14. Applies to each auxiliary.

| 160 hours | | ■ | ■ | | |
| 2 x 160 hours (includes mid-BI test) | | | | ■ | ■ |
| Final Electrical Test, MIL-PRF-38534, Group A, | | | | | |
| Subgroups 1 and 4: +25°C case | ■ | | | | |
| Subgroups 1 through 6, -55°C, +25°C, +125°C case | | ■ | ■ | ■ | ■ |
| Hermeticity Test | | | | | |
| Gross Leak, Method 1014, Cond. C | ■ | ■ | ■ | ■ | ■ |
| Fine Leak, Method 1014, Cond. A | ■ | ■ | ■ | ■ | ■ |
| Radiography, Method 2012 | | | | ■ | ■ |
| Post Radiography Electrical Test, +25°C case | | | | ■ ⁴ | ■ ⁴ |
| Final visual inspection, Method 2009 | ■ | ■ | ■ | ■ | ■ |
| RHA P: 30 krad(Si) total dose | | ■ | | ■ | |
| RHA R: 100 krad(Si) total dose | | | ■ | | ■ |
| Single Event Effect (SEE) ¹ | | ■ | ■ | ■ | ■ |
| Linear Energy Transfer (LET) 86 MeV cm ² /mg | | | | | |

Test methods are referenced to MIL-STD-883 as determined by MIL-PRF-38534.

Notes

- Our Redmond facility has a DLA approved RHA plan for Interpoint power products. Our SMD products with RHA "P" or "R" code meet DLA requirements.
- "OO" prototypes are non-QML products and may not meet all of the requirements of MIL-PRF-38534. "O" in the RHA designator position in Interpoint model numbers indicates DLA RHA "-" defined as no RHA.

- All processes are QML qualified and performed by certified operators.
- Not required by DLA but performed to assure product quality.
- Burn-in temperature designed to bring the case temperature to +125°C minimum. Burn-in is a powered test.

TABLE 28: ENVIRONMENTAL SCREENING AND RHA LEVELS

See "Table 29: RHA Acronyms" on page 44

SMRT Single, Dual and Triple Space DC-DC Converters

19-56 VOLT INPUT – 35 WATT – SPACE QUALIFIED

Notes: For "Table 28: Environmental Screening and RHA Levels"

1. Our Redmond site has a DLA approved RHA plan for Interpoint power products. Our SMD products with RHA "P" or "R" level meet DLA requirements.
2. "OO" prototypes are non-QML products and may not meet all of the requirements of MIL-PRF-38534. "O" in the RHA designator position in Interpoint model numbers indicates DLA RHA "-" defined as no RHA.
3. All processes are QML qualified and performed by certified operators.
4. Not required by DLA but performed to assure product quality.
5. Burn-in temperature designed to bring the case temperature to +125°C minimum. Burn-in is a powered test.
6. High dose rate test.
7. Low dose rate test.
8. No SEGR, SEL or SEU. SET is within the transient limits as specified in the Electrical Characteristic tables.

| Acronym | Definition |
|-------------|------------------------------|
| HDR | high dose rate |
| LDR | low dose rate |
| LET | linear energy transfer |
| MeV | million electron volts |
| RHA | radiation hardness assurance |
| SEE | single event effect |
| SEGR | single event gate rupture |
| SEL | single event latch-up |
| SET | single event transient |
| SEU | single event upset |
| TID | total ionizing dose |
